

Comprehensive Corporate Operations & Commercial Policy Manual

A Unified Operational Framework Governing Commercial Strategy, Governance, and Risk Management

1. Pricing Policy Framework

1.1 Strategy & Objectives: The company utilizes a value-based pricing strategy blended with strategic cost-plus constraints to optimize margin realization while remaining competitive. Prices must reflect value delivered, market conditions, and target profit thresholds.

1.2 Price Review Cycles: Product and service pricing must undergo formal review semi-annually. Dynamic adjustments due to sudden supply chain cost increases exceeding 5% may trigger emergency revision sequences authorized by the Chief Financial Officer (CFO).

1.3 Margin Protection: No individual sale or contract may deviate below a minimum floor gross margin of 35% without formal, documented authorization from regional leadership.

2. Inventory & Stock-Holding Policy

2.1 Stock Levels & Buffer Management: Inventory must be maintained at optimal buffer levels calculated via a rolling 90-day demand forecast. Minimum and maximum safety thresholds are dynamically adjusted inside the ERP system monthly.

2.2 Reorder Points (ROP): Automated reorder flows are governed by the formula: $ROP = (Average\ Daily\ Sales\ Volume \times Lead\ Time) + Safety\ Stock$. Warehouse managers must audit pending automated POs weekly.

2.3 Audits & Cycle Counting: A continuous cycle counting framework replaces annual physical inventory checks. Category 'A' high-value stock must be verified monthly, Category 'B' quarterly, and Category 'C' bi-annually.

2.4 Slow-Moving & Obsolete Stock: Items without transaction activity for more than 180 days are classified as slow-moving and flagged for markdown, bundle-liquidation, or write-off protocols.

3. Discount & Commercial Concession Policy

3.1 Tiered Authorization Matrix: Discounts from standard commercial pricelists are strictly governed by role-based authorization parameters to control margin leakage.

Discount Range	Authorized Approver Role	Documentation Requirement
0.0% – 5.0%	Account Executive / Sales Rep	Standard CRM entry
5.1% – 15.0%	Regional Sales Director	Written CRM approval tag
15.1% – 25.0%	VP of Sales / Commercial Head	Formal sign-off form
> 25.0%	Chief Financial Officer (CFO)	Executive Board Memo

4. Sales & Lead Management Policy

4.1 Lead Allocation: Inbound marketing-qualified leads (MQLs) must be routed to account executives via a standardized round-robin methodology configured within the corporate CRM system, accounting for tier alignment and territory mapping.

4.2 Payment Terms: Default corporate payment parameters are set to Net 30 days from invoice date. Deviations to Net 45 or Net 60 require a comprehensive risk profile check and approval by the Credit Department.

4.3 Cancellations & Restocking: Confirmed business orders canceled post-processing are subject to a standard 15% restocking or administrative cancellation fee to offset processing and allocation resources.

5. Credit & Collections Policy

5.1 Credit Risk Assessment: All new B2B accounts requesting payment terms exceeding \$5,000 must undergo a mandatory financial credit review. Credit limits are assigned based on credit scores, trade references, and historical payment performance.

5.2 Dunning & Collections Sequence: Overdue accounts will systematically trigger the following communication escalation workflow: 5 days past due (friendly email notification); 15 days past due (formal demand letter); 30 days past due (telephonic collection intervention); 60 days past due (credit hold placement and legal escalation notice).

6. Returns, Refunds & Warranties Policy

6.1 Return Merchandise Authorization (RMA): No product returns are accepted without a valid, pre-approved RMA tracking number generated by the customer support infrastructure. Returns must be initiated within 30 calendar days of delivery.

6.2 Refund Eligibility: Goods must be returned in original packaging and un-utilized condition to qualify for a full credit memo. Defective items are evaluated under the standard 12-month manufacturer limited hardware warranty program.

7. Data Privacy, Information Security & Compliance Policy

7.1 Operational Regulatory Alignment: Sales and transaction architectures must remain fully compliant with applicable global frameworks including the General Data Protection Regulation (GDPR) and regional consumer privacy mandates.

7.2 Payment Card Industry Data Security Standard (PCI-DSS): No credit card parameters, CVV codes, or highly sensitive financial credentials may ever be archived or transcribed within corporate email repositories or unencrypted CRM clear-text fields. All transactions must pass securely via verified, tokenized third-party payment gateways.

8. Corporate Ethics & Anti-Bribery Policy

8.1 Commercial Conduct: Employees are strictly prohibited from giving or accepting corporate gifts, operational favors, entertainment packages, or financial incentives exceeding a nominal value of \$50 from any prospective client, partner, or government contractor.

8.2 Compliance Violations: Any breach of fair-dealing rules or antitrust laws will immediately initiate disciplinary review proceedings up to and including immediate termination of employment contract frameworks and structural legal reporting.
